

ZIN ZIN AYE CHAN

Sydney, NSW | zinzinayechan@gmail.com | 0414 450 892 | linkedin.com/in/zinzin-ayechan

PROFESSIONAL SUMMARY

Business Analytics graduate with dual majors in Accounting and Business Analytics from Macquarie University (WAM: 81, 2024 Merit List). Experienced in customer and sales data analysis, segmentation, dashboard design, and stakeholder reporting. Skilled at translating complex data into clear, practical recommendations for non-technical audiences across clients, teams, and senior leadership. Proficient in Python, R, SQL, Tableau, and Excel, with a finance and accounting foundation that supports business-focused analytical thinking.

SKILLS & SYSTEMS

Programming & Tools: Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), R, SQL, Java

Data & Visualisation: Tableau, Microsoft Excel (pivot tables, VLOOKUP, dashboards, data modelling), Jupyter Notebook, R Markdown, GitHub

Analytical Skills: Customer segmentation, sales trend analysis, machine learning (classification, clustering, regression), time series forecasting, statistical modelling, hypothesis testing, KPI reporting, exploratory data analysis, data cleaning

Stakeholder Skills: Client presentation, non-technical communication, requirements analysis, recommendations reporting, cross-functional collaboration

Accounting Software: Xero, MYOB

EXPERIENCE

Sales and Operations Associate | *Sunglass Hut*

Oct 2023 – Present

- Monitored daily sales performance, units sold, and budget attainment through an internal stock management system, identifying trends and translating findings into actionable floor decisions — including product display changes and stock prioritisation — that were consistently adopted by the store manager.
- Tracked KPIs including daily revenue targets and sell-through rates, flagging performance gaps with supporting data and recommending operational adjustments that improved day-to-day store performance.
- Reconciled 10+ daily cash and card transactions against POS records, tracing discrepancies back through individual entries to identify and resolve errors before end-of-day close.
- Maintained structured transaction and inventory records across POS and stock systems, ensuring data accuracy and consistency across financial and operational records daily.

Audit Assistant | *AIIESEC*

Sep 2021 – Jun 2022

- Reviewed 150+ financial records per period across 5 branches monthly, applying a structured compliance checklist to verify income and expenses aligned with approved budgets and internal policies.
- Investigated flagged data anomalies directly with responsible branch members, identifying and resolving issues including missing documentation, unrecorded income, duplicate entries, and miscategorised transactions.
- Consolidated financial submissions from 15+ departments across 5 branches into a single standardised Excel workbook each period, enforcing data entry standards and submission deadlines to maintain reporting accuracy.
- Drafted and presented monthly audit findings reports to management, translating financial discrepancies into plain-language summaries and actionable recommendations that enabled leadership to prioritise compliance remediation.

Business Development Branch Manager | *AIIESEC*

Aug 2021 – Jan 2022

- Researched and contacted 100+ companies across LinkedIn and Facebook as prospective event sponsors, maintaining a structured outreach pipeline in Excel and HubSpot to track status, industry fit, and follow-up activity.
- Converted outreach pipeline into 5 confirmed sponsorship partnerships over 6 months, contributing to 15% growth in branch sponsorship revenue compared to the prior period.
- Set team KPIs, outreach targets, and revenue goals at the start of each cycle, reviewing pipeline data weekly and adjusting strategy based on conversion rates and activity metrics.
- Produced and presented monthly performance reports covering pipeline data, conversion rates, and revenue results to clients, team members, and senior leadership, with recommendations that were regularly acted upon to adjust outreach strategy and resource allocation.

PROJECTS

Business Analytics Dashboard — Impact100 Sydney (Client Project) | *Tableau, Microsoft Excel*

- Designed a multi-persona interactive Tableau dashboard for a real client — Impact100 Sydney — as part of Macquarie University's PACE program. Harvested and cleaned data from 50+ organisations across Impact100 Global and the Australian Communities Foundation, built structured datasets from scratch, and created persona-driven dashboards to support funding decisions, SDG alignment analysis, and volunteering engagement. Presented findings and recommendations directly to the client in a formal stakeholder presentation.

Customer Segmentation Analysis | *Python, Scikit-learn, Matplotlib*

- Applied K-Means++ and Agglomerative Clustering to segment 4,000 supermarket loyalty card customers into 4 distinct groups, validated using the Elbow Method (optimal silhouette coefficient of 0.50). Produced detailed cluster profiles by income, age, occupation, and city size, and delivered targeted marketing strategy recommendations for each segment.

Used Car Price Prediction | *Python, Scikit-learn, Pandas*

- Compared Linear Regression, Elastic Net, and Random Forest models on a Kaggle dataset to predict used car prices. Random Forest achieved the strongest performance (private score: 0.120 vs 0.294 for Elastic Net and 0.490 for Linear Regression) and was recommended as the most effective approach based on out-of-sample accuracy.

Retail Turnover Forecasting | *Microsoft Excel*

- Built a multiple linear regression model with seasonal dummy variables to forecast Australian department store turnover using ABS data (Jul 2015 to Jun 2023), achieving an R-squared of 0.93. Produced a 12-month out-of-sample forecast, benchmarked model accuracy against an autoregression baseline, and recommended Holt-Winters exponential smoothing as a more robust alternative based on residual analysis.

Real Estate Investment Analysis — Ryde LGA | *Microsoft Excel*

- Analysed CPI-adjusted housing returns across dwelling types in Ryde LGA and Greater Sydney using time-series modelling. Identified that non-strata dwellings carried a significant price premium (median \$2,161,000 vs \$1,080,000 for all dwellings), with Ryde recording an all-dwelling growth rate of 9.47% against a faster Greater Sydney trend. Produced a structured investment recommendation balancing growth potential against market stability.

Traffic Pollution Regression Analysis | *R, R Markdown*

- Applied multiple linear regression to a real-world traffic dataset to identify predictors of air pollution (SPI index), achieving R-squared of 0.74. Used backward elimination to reach a final model with transport, road, and weather as significant predictors. Validated assumptions via residual and Q-Q plots and conducted two-way ANOVA to analyse interaction effects across 252 observations.

EDUCATION

Bachelor of Commerce — Accounting & Business Analytics

Graduated Aug 2025

Macquarie University, Sydney NSW

WAM: 81.0 | 2024 Merit List | 2024 Session 1 Peer Mentor, University Peer Mentoring Program

Relevant units: Data Modelling and Visualisation (HD), Applied Statistics (HD), Business Forecasting (HD), Accounting Information Systems (D), Financial Statement Insights and Analysis (D), Advanced Analytics Techniques (Cr)
